AWAIS ANWAR

Full Stack Engineer | AI Agents | Automation Platforms

m.awaisanwar@outlook.com | +92 314 625 5010 | Lahore, Pakistan | linkedin.com/in/awaisanwar12 | github.com/awaisanwar12

Summary

Full Stack Engineer with 7+ years building production systems across Node.js, NestJS, React, Next.js, Angular, FastAPI, Django, PostgreSQL, MongoDB, Redis, BullMQ, and Socket.IO. Strong focus on AI evaluation and appraisal pipelines, AI agents, ATS/hiring workflow platforms, voice-agent automation, Web3 gaming and token staking systems, esports data intelligence, OCR/document intelligence, logistics automation, RAG systems, and multi-service SaaS products. Experienced owning frontend, backend, integrations, data models, async workers, and production observability end to end.

Core Skills

Languages: JavaScript, TypeScript, Python, SQL **Frontend:** React, Next.js, Angular, React Native, Tailwind CSS, Material UI, Ant Design, AG Grid

Backend: Node.js, Express.js, NestJS, FastAPI, Django, REST APIs, WebSockets, Socket.IO, TypeORM **Data:** PostgreSQL, MongoDB, Redis, Pinecone, embeddings, semantic search

AI/Agents: AI Evaluation & Appraisal Pipelines, OpenAI SDK, LangChain, LangGraph, OpenAI Agents, RAG, MCPs, Vapi, Retell, Bland AI, OCR/document AI, Langfuse, OpenTelemetry

Infra/Tools: Docker, Docker Compose, Nginx, Git/GitHub, Kafka, RabbitMQ, BullMQ, Linux, S3, Playwright/browser automation, Liquipedia & HLTV data pipelines

Experience

Full Stack / AI Engineer **Apr 2026 to Present**

Cash for Arms (cashforarms.com) | FirearmLand (firearmland.com) | GunBuyback.org (gunbuyback.org) (Remote)

- Engineered full-stack frontend and backend systems across Next.js and FastAPI for Cash for Arms and FirearmLand, and Django for GunBuyback.org, powering nationwide FFL-licensed firearm, ammunition, and accessory buyback, consignment, and live auction platforms across all 50 US states.
- Built AI evaluation and appraisal pipelines for automated intake screening, photo and condition grading, canonical taxonomy matching (brands, nameplates, platforms, calibers/cartridges, categories), and real-time market valuation.
- Developed end-to-end submission intake, automated cash-offer and consignment calculation, FFL transfer compliance workflows, prepaid insured shipping orchestration, same-day ACH/RTP payout tracking, and live penny-auction listing synchronization.

Full Stack / AI Engineer **Sep 2025 to Mar 2026**

JASPI (Remote)

- Built a production-grade AI Applicant Tracking System with job management, candidate pipelines, resume parsing, interview analysis, candidate scoring, scheduling, notifications, and recruiter analytics.
- Developed microservices across auth, jobs, candidates, AI, notifications, scheduler/queues, and API gateway using NestJS/TypeScript, Next.js, PostgreSQL, Redis, BullMQ, Docker, and S3.
- Implemented OpenAI/LangChain-based AI services for resume extraction, job improvement, candidate evaluation, real-time chat, interview evaluation, and multi-agent workflow orchestration.
- Integrated Google/Microsoft/Zoom OAuth and scheduling, Slack/email/SMS notifications, JWT/RBAC/2FA security, caching, audit logging, health checks, and production monitoring.

Full Stack Developer **Sep 2025 to Mar 2026**

PowerMatch (Remote)

- Built full-stack features for PowerMatch, an AI-assisted construction hiring platform that helps companies review matched worker profiles by trade, experience, location, commute, availability, and role fit.
- Implemented candidate/company flows, profile and CV views, role-requirement capture, shortlist workflows, match-score explanations, screening status, and recruiter/admin dashboards.
- Developed frontend components, backend APIs, database models, search/matching workflows, validation, authentication, and user-facing hiring-product interactions.

Full Stack Engineer **Jul 2024 to Sep 2025**

The Game Company, UAE (Remote)

- Built and maintained gaming, Web3 staking, AI, and crypto products including token staking platforms, reward pools, prediction/staking dashboards, tap-to-earn games, online tournaments, admin CMS tools, and AI support agents.
- Engineered automated esports data pipelines and scrapers utilizing Liquipedia and HLTV to ingest live tournament brackets, match schedules, team rosters, and real-time match telemetry for gaming and prediction platforms.
- Developed full-stack product features across frontend, backend, staking and wallet workflows, admin dashboards, APIs, data models, automation workflows, and production support.
- Implemented RAG/semantic retrieval, structured outputs/function calling, assistant configuration, conversation history, async workers, WebSocket/WebRTC streaming, and Langfuse/OpenTelemetry observability.

Full Stack Developer **Dec 2022 to Jul 2024**

Zone Delivery Service, Dubai

- Built in-house web applications for 4PL logistics, merchant portals (MSP), rider operations (RMP), employee paperwork, delivery fleets, real-time tracking dashboards, and internal process automation.

Full Stack Engineer **Jan 2022 to Dec 2022**

Hyse Tech Private Limited, Islamabad

- Developed React/Next.js applications with SSR, reusable components, API integrations, performance optimizations, and production UI delivery.

Full Stack Engineer **Sep 2018 to Dec 2021**

Nested Logics Inc., Islamabad

- Built responsive React frontends, dashboards, business applications, API integrations, and production web features from design and product specifications.

Selected Projects

Cash for Arms, FirearmLand & GunBuyback.org **cashforarms.com · firearmland.com · gunbuyback.org**

Next.js & FastAPI (Cash for Arms, FirearmLand), Django (GunBuyback.org), PostgreSQL, Redis, AI Evaluation Pipelines

- Built Next.js and FastAPI systems for Cash for Arms and FirearmLand, and Django backend and intake systems for GunBuyback.org across nationwide firearm, ammunition, and accessory buyback, consignment, and no-reserve auction platforms.
- Engineered AI evaluation pipelines for intake screening, canonical brand/model/caliber taxonomy resolution, condition grading, automated cash-offer generation, and auction catalog synchronization.

JASPI | AI Applicant Tracking System

NestJS, Next.js, PostgreSQL, Redis, BullMQ, OpenAI, LangChain, Docker, S3

- Built a microservices ATS covering job lifecycle management, candidate tracking, resume review, interview scheduling, scoring rubrics, career pages, and analytics.
- Designed AI services for resume parsing, candidate scoring, interview analysis, chat with candidates/recruiters, job-content generation, and multi-agent evaluation workflows.

AI Voice-Agent Automation Suite

Vapi, Retell, Bland AI, Node.js/NestJS, Webhooks, PostgreSQL, Redis

- Built AI voice agents for trucking/logistics automation, medical reception, and educational reception workflows, replacing repetitive dispatcher/front-desk labor and saving thousands in operational costs.
- Implemented inbound/outbound call flows for qualification, scheduling, FAQs, appointment intake, shipment updates, follow-ups, handoffs, and human escalation.
- Connected voice agents to backend tools through structured webhooks, transcripts, call summaries, CRM/TMS updates, confidence thresholds, and audit logs.

TradeOS | AI Freight & Trade Compliance SaaS

OCR, LLMs, Node.js/NestJS, Python, PostgreSQL, RAG, APIs

- Built an AI platform for freight and trade documentation that used OCR/document AI to process shipping documents, detect missing fields, inconsistencies, and compliance faults.
- Added global customs-check workflows, sanctions/restricted-party screening, document validation, and risk signals for international trade operations.
- Built recommendation logic for freight-forwarder selection, charge comparison, low-cost routing/options, and operational decision support.

GLASC.IO | Fleet Management & Logistics Analytics

Kafka, Cassandra, RabbitMQ, PostgreSQL, Express.js, Redis, React, Socket.IO

- Built real-time fleet analytics for on-field truck data, weight/position tracking, event detection, geofencing, alerts, and logistics dashboards.

Other Engineering Projects

Next.js, Node.js, Angular, Python, MongoDB, Redis, GCP, AWS, Tencent Cloud

- Built token staking platforms, reward pools, prediction/staking dashboards, tap-to-earn games, online tournament/admin platforms, location-aware regional tournament routing, Telegram gaming, Liquipedia and HLTV esports scrapers, XAI chatbot/web-agent services, and full-stack energy platforms.

Education

BS (Hons.) Software Engineering **2018**

University of Engineering and Technology (UET), Taxila, Pakistan

Certifications

JavaScript (Intermediate) (HackerRank) | Developing Back-End Apps with Node.js and Express (IBM) | Interactivity with JavaScript (University of Michigan) | Frontend Developer (React) | Meta Front-End Developer Specialization
